

SDWAN 2.0

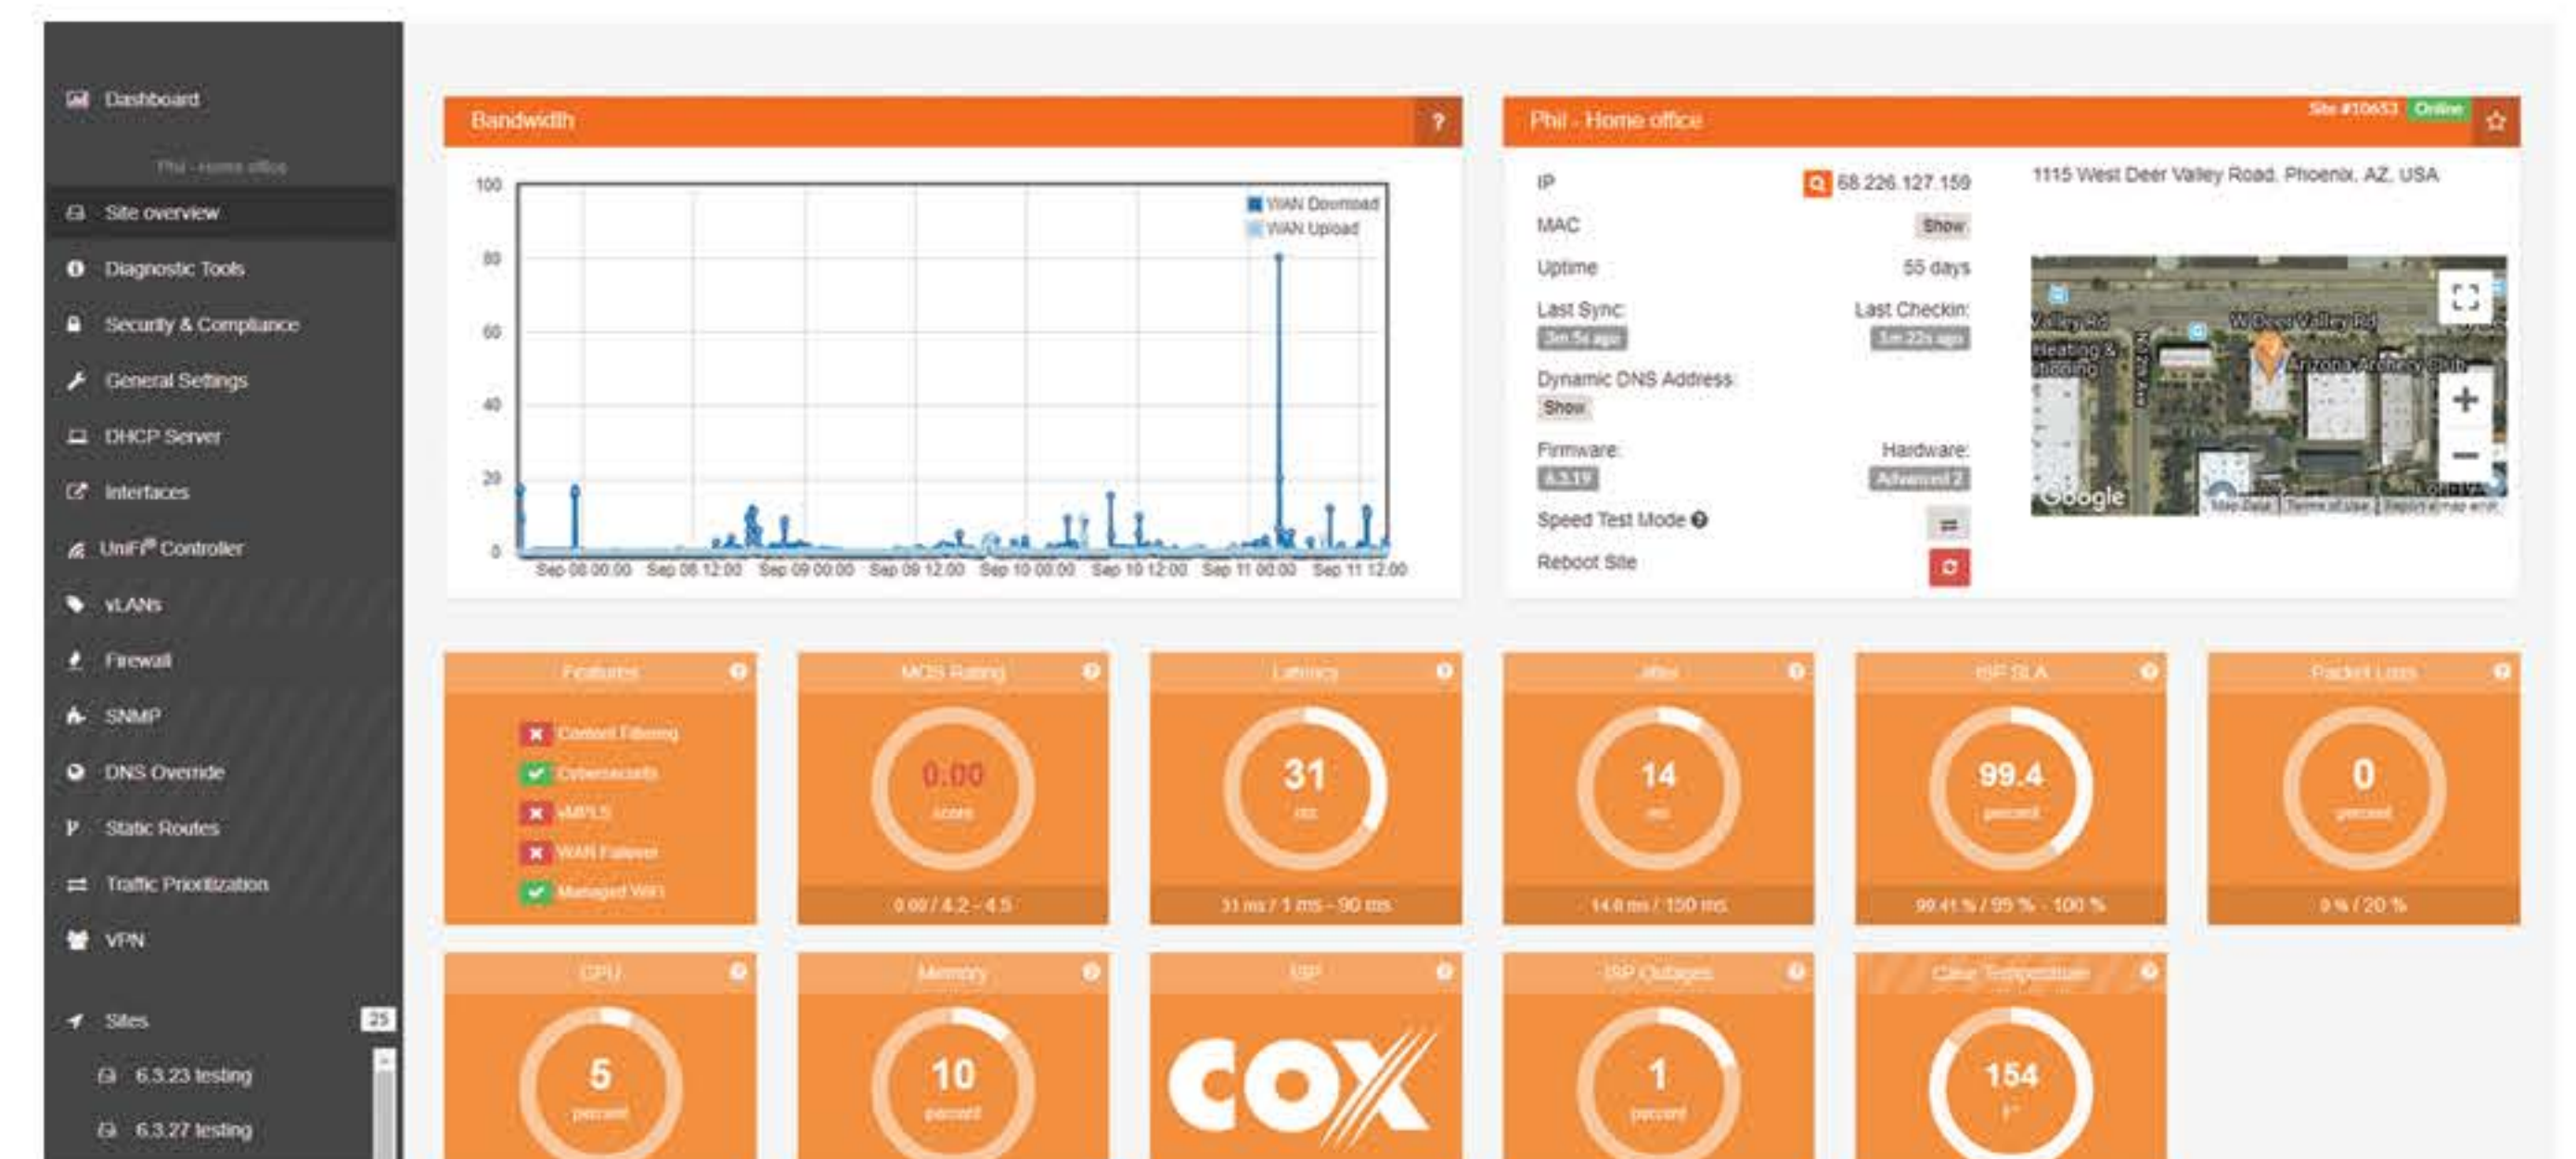

Reliable Connectivity – All Under One Roof

What Does SDWAN2.0 Do?

SD-WAN has helped businesses improve their connectivity, by increasing the reliability of the Internet connections, adding redundancy, failover and providing application prioritization.

SD-WAN barely scratched the surface of what businesses actually need or want. SD-WAN 2.0 is a package of technologies such as managed WiFi, Cybersecurity and a suite of diagnostics and management tools not just for the WAN but also for the LAN. SimpleWAN's SD-WAN 2.0 is the perfect toolkit for any IT group wanting to cut down time deploying, diagnosing and maintaining all of these technologies. SD-WAN 2.0 is the product that gives you your time and life back through automation and technology.
