

# SDWAN 3.0

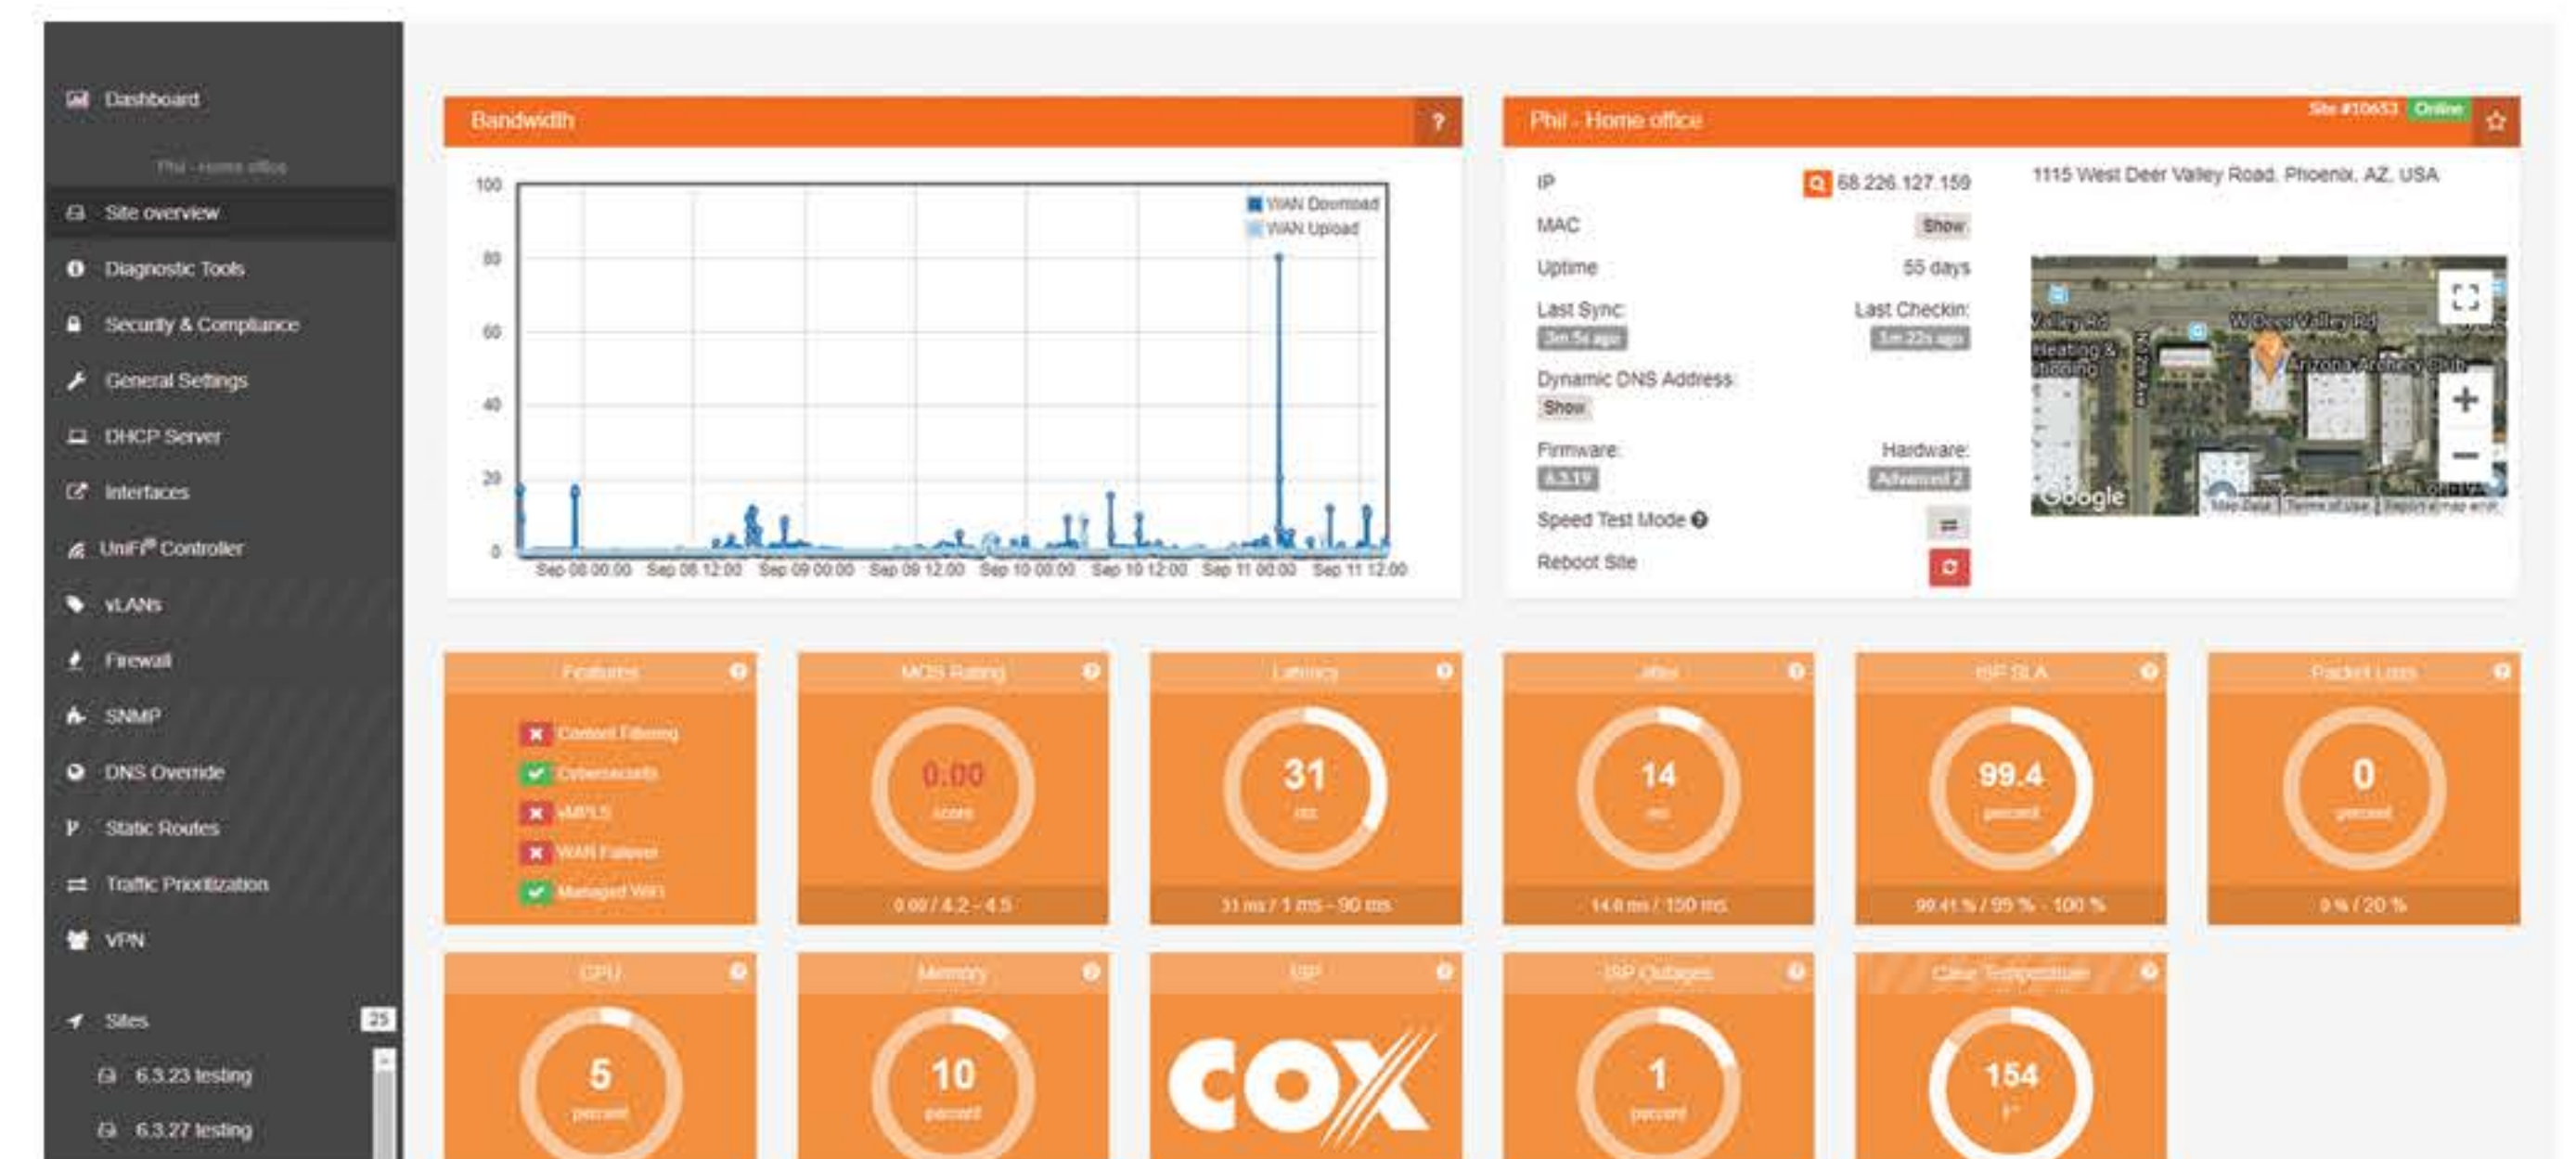

Reliable, Security and Connectivity – All Under One Roof

## What Does SDWAN 3.0 Do?

SDWAN 3.0 includes Uptime, vMPLS, and UTM.

SD-WAN 3.0 encompasses all the exciting features of SD-WAN 2.0 but takes security and functionality a huge step forward. With SD-WAN 3.0, SimpleWAN's enterprise class vMPLS solution is included along with Uptime and our Comodo UTM. The vMPLS technology can connect multiple branch sites together and simulate an expensive, secure MPLS for a fraction of the cost over public broadband. The SimpleWAN Uptime function secures phone calls and ensures calls don't drop, even when your primary Internet circuit goes down. Finally, the ultimate security: With UTM all of your web traffic is fully decrypted and analyzed before re-encrypting and sending it off to its destination. This technology can prevent against viruses, malware and ransomware plus a lot more.

## Benefits

- Reduce Network Cost
- Simple Provisioning
- Application Prioritization
- Increased Security

SDWAN 2.0 centralizes dozens of solutions you're currently paying for:

## What Are My Options?

Hardware:

Platinum 500

Features:

- Small form factor networking appliance
- 400 mbp throughput

Platinum 1000

- Rackmount appliance
- 1 gb throughput

## Licensing Includes:

- Network Analytics
- Firewall
- QoS
- Content Filtering
- Cyber Security
- Ubiquity Unify Integration
- HIPAA and PCI Reporting
